

## Last chance to get Rane C4 & G4's!

Despite what great benefits digital audio has brought our industry in many tech's opinions some processing gear is functionally better when the operator can actually grab a real knob or a fader instead of moving a virtual control with a mouse on a screen. Such is considered the case with graphic eq's, comps and gates and Rane over that last decade has been noted as making some of the best with their C4 quad comp and G4 quad gate and DEQ60 'Perfect Q' graphic eq's. One of the reasons they are considered outstanding is that they are actually digital units with conventional analogue controls offering the best of both worlds.

While the DEQ 60L's will continue on as one of the best available, the C4 and G4 are about to be retired. We are fortunate that our friends at Rane have given Contact and our customers an extremely special price and the first exclusive chance to clear them out at 50% off the regular price (which was a great value to begin with). We anticipate that the limited number left will be purchased within days of this announcement going out so call your sales manager or Scott Hardie on the order desk without hesitation to reserve some while you generate a purchase order.

Regardless of what the visionaries bode for the future, there will always be a need and demand for quality units such as these for live productions and installations of all types and complexity.

Here is a synopsis of their great features and functionality. Don't snooze and loose.

### Rane C4: Quad Compressor/Limiter **NEW!** Current Dealer Price is: ~~\$886~~ **NOW: \$475 UP**

- Independent Compressor / Dynamic EQ / Limiter per channel.
- Relative-threshold Dynamic EQ remains calibrated for all levels.
- Auto mode for fast setup of Attack and Release.
- External side-chain with balanced / unbalanced 1/4" TRS input.
- Side-chain has a parametric EQ with Compress, Dynamic EQ and Listen modes.
- Adjustable soft or hard knee compression.
- Independent metering: Side-chain level, Threshold indicator, Gain reduction and Limiter headroom.
- Stereo Link between channels 1 and 2 or 3 and 4.
- XLR and 1/4" TRS input / output connectors.

### Rane G4: Quad Gate **NEW!** Current Dealer Price is: ~~\$886~~ **NOW: \$475**

Dynamics controls include:

- Gate / Expand / Duck Modes
- Look-ahead Gating
- Stereo Link
- Adjustable Threshold, Attack, Release, Hold, Depth and Ratio
- Gain Reduction / Gate meter
- Bypass

Side-chain processing includes:

- Side-Chain metering
- Internal Low- and High-Cut Filters
- Internal / External switch
- Listen switch

**Also Available:**

**Rane DEQ60 Graphic Equalizer 3 Trade Show Demo Units**

**NOW: \$750 ea @ Net 30 Day Prices**

- Perfect-Q™: What You See Is What You Get (No filter interaction)
- Proportional-Q: Classic smooth response
- Independent Accelerated-Slope™ 3-band full-cut tone controls
- Low-Cut and High-Cut Filters
- Input and Output Level controls
- Each channel may use A or B channel controls:
- Stereo Linking
- Two “analog memories”
- A-curve / B-curve comparison
- 25 mm sliders; includes security cover
- Two Boost / Cut ranges:  $\pm 6$  dB or  $\pm 12$  dB
- Eight segment metering for each Input and Output
- Analog controlled DSP
- XLR, TRS and Euroblock connectors
- Bypass switch (DSP), Bypass relay (power failure

**Also Available:**

**Rane MONGOOSE Remote Audio CobraNet Interface 2 Trade Show Demo Units**

**Current Dealer Price is: ~~\$1328~~ NOW: \$750 ea @ Net 30 Day Prices**

The Mongoose and its Tracker software work with Rane’s Remotes Audio Devices (RADs) and your CobraNet network to deliver digital audio to the “last mile” of installations – between the equipment room/rack and remote spaces. OK, it’s not a mile, we lied: it’s actually 150 meters. The Mongoose’s 32-by-32 digital audio matrix router receives its first 16 audio channels from up to eight RADs via the eight rear panel 8P8C (RJ-45) Remote Audio Device ports. The second 16 matrix input channels come from two eight-channel CobraNet receive (Rx) Bundles via standard CobraNet Primary and Secondary/backup ports. The 32 matrix router outputs transmit 16 channels to eight RADs and 16 more channels to two CobraNet transmit (Tx) Bundles.
